Forms of Energy	
Ki/Spirit Energy	Spirit power from the body or gathered from the air.
Life Energy/Holy Energy	This energy, said to be the most powerful type of energy, can be transferred from person to person, temporarily making them stronger. It can also be used to heal injuries. Faith uses Life Energy to heal others, but there is a big drawback to this. Using life energy will drain your life away, and if not used carefully, can kill you quickly.
Psi/Psychic Energy	Invisible energy used by psychics.
Cosmic Energy	Mysterious energy summoned from the cosmos.
Dark Energy	Mysterious energy used by the Dark Empire
Electricity	Electricity produced by one's body by combining ki with air particles, can be measured in volts.

Sayan classes/levels	
Average, Novice	Knows some combat, but is considered weak.
Soldier, Trooper, Low Class	Trained in combat but is still weak.
Elite, First Class	Trained in combat, and very strong.
Super Sayan (second stage)	Sayans who have accomplished this level are considered the “Prophets of God” because they are powerful enough to change history. Super Sayans have golden

	hair, and their aura is a golden color as well. They are faster and stronger than in their normal state. They are respected by other sayans.
Second Stage Alpha, Super Sayan Alpha	This is the infant stage of being an SS. The warrior can transform, but only if he feels a deep emotion and need for it. He cannot correctly control his powers, and is not as strong as a normal SS. A teenager/kid can reach this stage, but he cannot move beyond this stage without more training and discipline.
Second Stage Beta Normal Super Sayan	An SS can transform and de-transform at will, and can control his powers.
3rd Stage Alpha Super Sayan Rage	This level of SS is extremely dangerous. This is just an advanced SS except that the SS is not conscious over his actions. This can be set off by a normal sayan feeling extreme anger and sadness at the same time. When Tyson experiences this, he loses all control. The anger, hatred, frustration, and sadness of losing someone becomes so great he has the desire to kill – he falls unconscious, and then re-awakens as a ruthless killer – who slays both enemy and allies. The only way(s) to return to normal is for the SS to either run out of energy, or feel an emotion that will calm him down.
3rd Stage Beta Super Sayan Advanced	A 3rd Stage Sayan that can control his powers. Messiah reached this stage.
4th Stage	A level of SS that has power beyond comparison. When Tyson reaches this stage, he feels in control of his life, and understands things he wouldn't normally understand. It's like a higher state of being. Tyson can fully control his ki. This level is truly a "Prophet of God."

Tyson Spade's Power Levels	
1st Stage, Normal State	This is Tyson's normal state of being.
Super Sayan Alpha	When Tyson first experiences the Super Sayan power, he has little or no control over it. He only transforms unconsciously, when he is very angry, and loses his power quickly. At this point, Tyson often jumps into the 3rd stage, where he loses control of himself completely. He uses up energy quickly, and thus can only transform once a day.
Super Sayan Beta Normal Super Sayan	After getting used to transforming, Tyson gains control over the Super Sayan form. He can transform and de-transform at will, and in addition, he can transform more than once a day.

3rd Stage Super Sayan Rage	Also called Super Sayan Rage, one has no control over their will. At this stage, Tyson is nothing more than an overpowered killing machine, unable to tell friend from foe.
4th Stage True Super Sayan	At this stage, Tyson has complete mastery over his ki, and can also feel the opponent's ki in great detail. It's definitely a higher state of being where he feels a sense of calmness he's never felt before, almost like an enlightened warrior.
The Phoenix 5th Stage	Tyson becomes the Phoenix after absorbing the Enchiron Crystal into his body, which contains the spirit of the legendary fire bird. At first, Tyson becomes the Phoenix unconsciously, but later on, he can transform into this powerful state at will.
The True Phoenix Phoenix 2nd Stage	Tyson transforms from regular Phoenix to this advanced Phoenix out of a need. He grows a crystal on his forehead, and he also gains the symbols of the Ko-Rashm on his face and various parts of his body. Nobody knows about this stage, about its origins, or its limitless power. Only the user and master of the Enchiron Crystal knows...or does he?

Nebula Spade's Power Levels	
1st Stage, Normal State	This is Nebula's normal state of being.
Second Stage	When Nebula gets angry, he reaches this stage and ascends to a new level of power.
Rainbow Warrior (3rd Stage)	After collecting all Elemental Crystals, they combine to form the Rainbow Crystal, and whoever possesses this crystal is given exceptional powers. This could be said to be Nebula's third stage of transformation.

Blazer's Power Levels	
1st Stage, Normal State	This is Blazer's normal state of being.
Super Sayan Alpha	Much like Tyson, when Blazer first becomes a Super Sayan, he has little or no control over his newfound powers. Often, he jumps into the 3rd Stage after transforming, becoming a killing machine who has no control over his own consciousness.
Super Sayan Beta Normal Super Sayan	After getting used to being a Super Sayan, Blazer has more control over his newfound powers. He can transform and de-transform at will, and can summon this level more than once a day.
3rd Stage Super Sayan Rage	Also called Super Sayan Rage, one has no control over their will. At this stage, Blazer is nothing more than an overpowered killing machine, unable to tell friend from foe.

Anubis Warrior (4th Stage)	Anyone who collects all 7 Anubis Crystals will be granted powers beyond imagination. Blazer meditates next to the Anubis Crystals for a while, and he claims that he's spoken to the spirit of Anubis. And thanks to that, he is able to reach the 4th Stage of the Super Sayan levels, although it's different than Tyson and Nameless.
